

7.8. Start Tab

Start tab is active by default when you start Streamline. It is divided into three more tabs which are **Projects**, **Examples** and **Tutorials**.

Projects

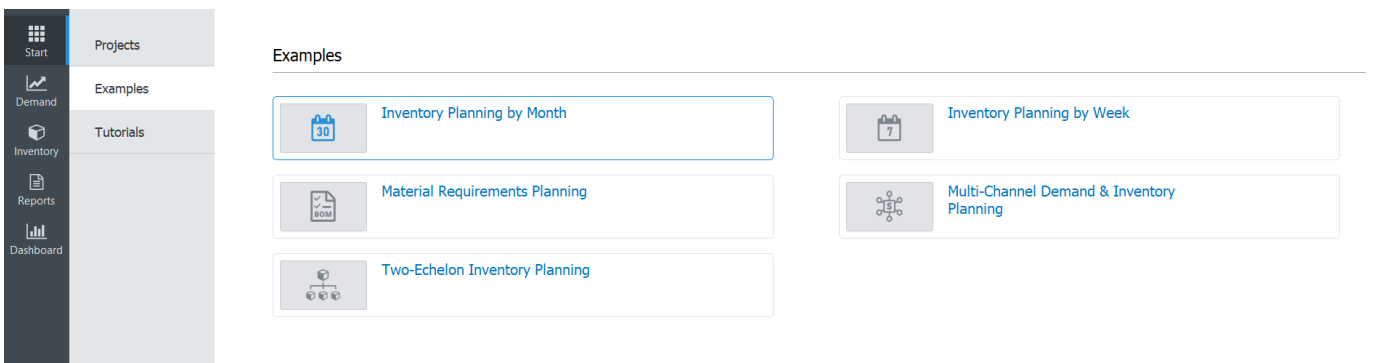

The tab contains the buttons for *starting a new project*, *opening an existing one* as well as *connecting to a project through the server*.

Besides that, the tab has the *Recent projects* section where the user can get quick access to previously opened projects.

Examples

the tab contains five build-in examples which cover most of the business models that Streamline supports, like manufacturing or multi-echelon chain. These projects have all the necessary data, so can be used for training purposes.

Tutorials

Along with the *User Guide* (a shortcut to the website is available in the lower-left corner), Tutorials are

the short videos covering some necessary information for easy and comfortable learning of the software.

The screenshot shows a web interface for GMDH software documentation. On the left is a dark sidebar with icons and labels for 'Start', 'Demand', 'Inventory', 'Reports', 'Dashboard', and 'User Guide'. The main area is titled 'Tutorials' and contains 14 video thumbnails arranged in two columns. Each thumbnail includes a play button icon, a title, and a list of tags. The tags are listed on the right side of the page.

Tutorial Title	Tags
Importing from Excel file. Aggregated data	#data import #Excel
Importing from Database	#data import #database
Viewing the forecast	#forecasting
Forecast adjustments & Annotations	#forecasting #demand planning
Forecasting a new product	#forecasting
Actual data adjustments	#forecasting #demand planning
Revenue forecasting	#forecasting #revenue
Importing from Excel file. Transactional data	#data import #Excel
Forecasting methods	#forecasting #forecasting methods #demand planning
Forecast approval system	#forecasting #demand planning
Generating reports	#reports #demand planning #inventory planning
Accounting for lost sales	#forecasting #demand planning
Inventory planning & optimization:	#data import #Excel #replenishment process #safety stock #reorder plan #export capabilities #inventory planning
Tips: Filters and mass-editing	#report customization #filters #replenishment parameters #mass-editing #inventory planning

Tags on the right side of the page include: #all, #data import, #database, #demand planning, #Excel, #export capabilities, #filters, #forecasting, #forecasting methods, #inventory planning, #mass-editing, #reorder plan, #replenishment parameters, #replenishment process, #report customization, #reports, #revenue, #safety stock.

Next: Demand forecasting
